SUMMARY

Hello! My name is Noah Johnson, and I am currently a Full Stack Engineer proficient in JavaScript, React.js, and Node.js. I have four years of customer service experience which allowed me to develop teamwork, communication, and patience. I also have an interest in sports, especially golf and baseball.

SKILLS

Front-End: JavaScript ES6, React, React Hooks, HTML5, CSS

Back-End: Node.js, PostgreSQL, Express

PROJECTS

Flash Card App | [Project Link](#)

A mobile application designed for teachers to create decks of flash cards for any subject to promote educational achievement with students.

- Running tests from the command line
- Writing React function components
- Creating routes, including nested routes, using React Router
- Using hooks like `useState()`, `useParams()`, and `useHistory()`

We Love Movies | [Project Link](#)

A database that builds out specific routes so that users can gain access to data about movies, theaters, and reviews.

- Receive requests through routes
- Access relevant information through route and query parameters
- Build an API following RESTful design principles
- Write database migrations using Knex's migration tool

Restaurant Reservation System | [Project Link](#)

A culmination of everything that was taught in the course put together all into one project.

Backend and Frontend applications designed around user stories and how to implement them.

- The app must be a full-stack app using React.js, CSS, Node.js, Express, and PostgreSQL.
- All code must be high quality, error free, commented as necessary, and clean.
- Use React along with the API that you built as part of the final capstone.
- Node, Express, PostgreSQL API, React and CSS.
